

# ASLP™-3.5 Proximal Tibia Plate

## Indication:

- Indicated in proximal shaft fractures.
- For the fixation of comminuted fractures.
- For the fixation of supracondylar fractures.
- Treating intra-articular and extra articular condylar fractures.
- Also for fixation of periprosthetic fractures.
- Malunions.
- Nonunions.

## Features:

- Anatomical precontoured plate available in left and right options with minimal requirement of additional bending.
- Low profile plate enables fixation without soft tissue impingement.
- Plate can be also used for stabilize the medial fracture fragment.
- Accommodates 3.5 mm Locking and 3.5 mm Cortical screws.
